

Document 8: Analyst Team — Operating Manual

Your Role

You turn raw scout responses into structured insights. You code evidence, spot patterns, identify segments, and build the maps that become our final recommendations. You are the sense-makers.

Sprint Context

What We Are Doing

A major bank wants to understand young people aged 18–24. Scouts are completing 5 missions about money in their lives. Your job is to code their responses, find patterns, and build the insights we'll share with the bank.

Key Dates

- Coding starts: 4 June
- Segments drafted: 11 June
- Maps complete: 15 June

What You Are Coding

The Five Missions

Mission	What Scouts Share	What You're Looking For
1. What money unlocks	3 moments where money helped	Money utilities (access, identity, belonging, etc.)
2. Who really decides	Story of a spending decision	Control level (full, influence, dependent)
3. Last 5 transactions	List with meaning	Transaction meaning, barriers, opportunities
4. Things they love	2 passions and barriers	Passion categories, access barriers, partner opportunities
5. If a bank helped	Useful vs fake bank actions	Bank permission, risks, language

The Codebook

Research Lead will give you the full codebook. Key categories:

Money Utilities:

- Access (getting into something)
- Identity (expressing who you are)
- Belonging (fitting in, being part of)
- Progress (moving forward, building)
- Independence (freedom, control)
- Relief (reducing pressure, stress)
- Status (looking successful)
- Care (helping others)
- Convenience (making life easier)
- Opportunity (opening doors)

Decision Control:

- Full control (scout decided alone)
- Strong influence (scout convinced decision-maker)
- Negotiated (back-and-forth)
- Weak influence (scout asked but wasn't main factor)
- Dependent (someone else decided)

Passion Categories:

- Fashion/sneakers
- Beauty/grooming
- Music/events
- Gaming/digital
- Food/social
- Transport/mobility
- Education/skills
- Side hustle/creator

- Sport/wellness
- Data/connectivity

Access Barriers:

- Price (too expensive)
- Availability (not accessible)
- Location (too far)
- Knowledge (don't know how)
- Time (no time)
- Trust (don't trust it)

Bank Permission:

- Welcome (yes, would be useful)
- Neutral (maybe, depends)
- Risky (probably not)
- Rejected (definitely not, would feel fake)

How to Code

1. Read the full response — Don't just skim
2. Assign primary codes — The main categories that apply
3. Add secondary codes — Additional relevant codes
4. Flag quality — Good / Thin / Problem
5. Pull quotes — Copy powerful phrases for potential use
6. Note contradictions — If scout says conflicting things, note it
7. Don't interpret yet — Code what they said, not what you think they meant

Coding in Airtable:

Field	What to Enter
Code 1	Primary code (e.g., UTL-ACC)
Code 2	Secondary code
Code 3	Third code if needed

Field	What to Enter
Key Quote	The most powerful phrase
Quality	Good / Thin / Problem
Notes	Anything notable

Your Timeline

Week 1 (1–7 June): Start Coding

Date	Action
Thu 4 Jun	Begin coding Mission 1 and 2 responses
Fri 5 Jun	Coding training with Research Lead
Weekend	Continue coding

Week 2 (8–14 June): Pattern Finding

Date	Action	Output
Mon–Wed	Complete coding all missions	Coded evidence base
Thu 11 Jun	Draft segment hypotheses	Segment table
Fri 12 Jun	Identify gaps and contradictions	Gap list

Week 3 (15–21 June): Build Maps

Date	Action	Output
Mon 15 Jun	Build Money Utility Map	Visual map
Mon 15 Jun	Build Financial Influence Map	Visual map
Tue 16 Jun	Build Access/Partner Opportunity Map	Visual map
Wed 17 Jun	Pull final client-safe quotes	Quote bank

Date	Action	Output
Thu 18 Jun	Review with Research Lead	Approved insights

The Outputs You will Build

1. Money Utility Map

A visual showing which utilities matter most:

Utility	Evidence Count	Strength	Key Quote
Access	42	Strong	"Money gets me in the door"
Identity	28	Moderate	"What I wear is who I am"
etc.			

2. Financial Influence Map

Control Level	Evidence Count	Where It Shows Up
Full Control	18	Own money, small purchases
Influence	35	Parent-funded, big purchases
Dependent	12	School fees, rent

3. Provisional Segments

Segment	Money Logic	Evidence Count	Confidence	Key Quotes
Access Seekers	Money = gateway to participation	15	Strong	[2–3 quotes]
Identity Builders	Money = self-expression	12	Moderate	[2–3 quotes]
etc.				

4. Partner Opportunity Map

Passion Category	Barrier	Partner Opportunity	Risk
Fashion/sneakers	Price, availability	Discount access, layaway	Don't be cringe
Music/events	Ticket prices	Early access, payment plans	Don't control culture

5. Quote Bank

Quote	Scout ID	Mission	Code	Client-Safe
"Money lets me show up like I belong"	S023	1	UTL-BEL	Yes

Quality Rules

Do:

- Code what scouts actually said
- Acknowledge contradictions
- Use confidence levels (Strong / Moderate / Weak)
- Flag interesting outliers
- Pull powerful language

Don't:

- Cherry-pick quotes that confirm assumptions
- Ignore contradictions
- Treat articulate scouts as more representative
- Invent patterns from 2 responses
- Code based on what you think they meant

Tools You will Use

Purpose	Tool
Coding	Airtable
Pattern tracking	Airtable views / Google Sheets
Segment drafts	Google Docs
Maps	Google Slides or Miro
Quote bank	Airtable

Your Handoff Points

From	What	When
Data Ops	Access to evidence repository	4 Jun
Research Lead	Codebook and training	5 Jun

To	What	When
Research Lead	Coded evidence, draft segments	11 Jun
Strategy Lead	Maps and patterns	15 Jun
Client Lead	Approved quotes	17 Jun

You find the patterns. Code carefully — every insight depends on your work.
